SUBJECT INDEX

Abrasion
theoretical analysis of the basic mechanics of abrasive processes part I: general model, 251
theoretical analysis of the basic mechanics of abrasive processes part II: model of the ploughing process, 267
Abrasive wear
abrasive wear and electronic properties of materials, 219
low load abrasive wear behaviour of plasma spray and laser-melted plasma coatings, 197
Air bearings
a computer simulation method for dynamic and stability analyses of air bearings, 307
Alloy glasses
wear resistance of Fe–Co–Si–B alloy glasses, 191

Bearings
a computer simulation method for dynamic and stability analyses of air bearings, 307
the influence of residual stresses on rolling contact mode II driving force in bearing raceways, 17
Boundary lubrication
some aspects of boundary lubrication in the local contact of friction surfaces, 69

Ceramics
dry sliding wear behavior of an Si–Al–O–N ceramic, 79
Chromium
the effect of sulphide and oxide inclusions on the wear rates of a standard C–Mn and a Cr–Mo alloy rail steel, 285
Computer simulation
a computer simulation method for dynamic and stability analyses of air bearings, 307

Contacts
some aspects of boundary lubrication in the local contact of friction surfaces, 69
the effect of contact temperature on the performance of a high current density current collection system, 1
the influence of residual stresses on rolling contact mode II driving force in bearing raceways, 17
Current collection
the effect of contact temperature on the performance of a high current density current collection system, 1
wear in simulated railway overhead current collection systems, 167

Deformation
cumulative deformation and fracture of sliding surfaces, 149
Dry sliding
dry sliding wear behavior of an Si–Al–O–N ceramic, 79
wear lip formation during dry sliding, 57

Elastic wheels
rolling resistance of elastic wheels on flat surfaces, 117
Electronic properties
abrasive wear and electronic properties of materials, 219

Ferrography
an assessment of quantitative and qualitative ferrography, 31
Fracture
cumulative deformation and fracture of sliding surfaces, 149
Fretting
on fretting maps, 131
Friction
some aspects of boundary lubrication in the local contact of friction surfaces, 69
modeling the effect of lubrication on friction behavior, 227

© Elsevier Sequoia/Printed in The Netherlands

Lasers
low load abrasive wear behaviour of plasma spray and laser-melted plasma coatings, 197
Lubrication
some aspects of boundary lubrication in the local contact of friction surfaces, 69
modeling the effect of lubrication on friction behavior, 227

Manganese
the effect of sulphide and oxide inclusions on the wear rates of a standard C–Mn and a Cr–Mo alloy rail steel, 285
sliding sphere wear test on nickel zinc and manganese zinc ferrites, 91
Molybdenum
the effect of sulphide and oxide inclusions on the wear rates of a standard C–Mn and a Cr–Mo alloy rail steel, 285

Nickel
sliding sphere wear test on nickel zinc and manganese zinc ferrites, 91

Particles
note on the experimental measurement of particles embedded in one and two in-line tubes in a high speed gas stream, 211
Plasma
low load abrasive wear behaviour of plasma spray and laser-melted plasma coatings, 197
Ploughing
theoretical analysis of the basic mechanics of abrasive processes part II: model of the ploughing process, 267

Rails
the effect of sulphide and oxide inclusions on the wear rates of a standard C–Mn and a Cr–Mo alloy rail steel, 285
Railways
wear in simulated railway overhead current collection systems, 167
Rolling
the influence of residual stresses on rolling contact mode II driving force in bearing raceways, 17
rolling resistance of elastic wheels on flat surfaces, 117

Sliding
cumulative deformation and fracture of sliding surfaces, 149
dry sliding wear behavior of an Si–Al–O–N ceramic, 79
sliding sphere wear test on nickel zinc and manganese zinc ferrites, 91
wear lip formation during dry sliding, 57
Steels
the effect of sulphide and oxide inclusions on the wear rates of a standard C–Mn and a Cr–Mo alloy rail steel, 285
Stresses
the influence of residual stresses on rolling contact mode II driving force in bearing raceways, 17
Surfaces
some aspects of boundary lubrication in the local contact of friction surfaces, 69
cumulative deformation and fracture of sliding surfaces, 149
rolling resistance of elastic wheels on flat surfaces, 117

Wear
abrasive wear and electronic properties of materials, 219
dry sliding wear behavior of an Si–Al–O–N ceramic, 79
the effect of sulphide and oxide inclusions on the wear rates of a standard C–Mn and a Cr–Mo alloy rail steel, 285
low load abrasive wear behaviour of plasma spray and laser-melted plasma coatings, 197
sliding sphere wear test on nickel zinc and manganese zinc ferrites, 91
wear in simulated railway overhead current collection systems, 167
wear lip formation during dry sliding, 57
wear resistance of Fe–Co–Si–B alloy glasses, 191

Zinc
sliding sphere wear test on nickel zinc and manganese zinc ferrites, 91
